Tung -- The South's Largest Tree Crop -- Tung

Farmers in the Gulf States have learned from past experience that the well-cared-for Tung Orchard offers a higher return than any other tree crop they can grow.

* * *

Tung Trees increase the value of the land and give larger returns each year. A few tung trees planted about your place will bring in a nice revenue.

* * *

On a commercial scale, Tung is the fastest-growing agricultural industry in the South.

* * *

Tung Oil is one of industry's most important raw materials.

Insure the very best results by using the very best trees.

Our Varieties are

F-578 — Tree—low-headed—numerous well-spaced scaffold branches. Low dense spreading top. High producer—high oil content. Fruit borne in clusters.

L-2—Low-headed tree—numerous scaffold branches spaced over about 18 inches at an angle about 90 degrees with trunk. Spreading tree—large bearing area. Clustered fruit.

L-51—Low-headed tree—numerous scaffold branches well-spaced at angle about 50 degrees. Large bearing surface. High producer—high oil content. Clustered fruit.

We shall be glad to help you in working out your planting problems in any way possible. Our years of experience are at your service.

The South Produces The Best Grade Tung Oil In The World

If you have a small farm, plant your fence rows, your chicken yard, and around house and garden in tung trees. Your cut-over land can start making money for you planted in a tung orchard.

Care, cultivation and harvest can be conveniently worked in between other crops.

Trees — grass and cattle are the wealth of The New South — Get started now!
